WHEN FLOORS BECOME SEATS

Echo's prestressed hollow-core slabs offer a combination of structural efficiency, ease of installation and adaptability to various construction scenarios. The pre-cured and purposeful design aspects contribute to their suitability for seating platforms in a range of buildings.

Ideal Applications:

- Seating platforms in cathedrals, stadiums, cinemas, auditoriums, lecture rooms, etc.

Versatile Installation:

- Can be applied on steel, concrete, brickwork or combinations thereof.

Installation Advantages:

- Speed of installation.
- No propping or back-propping is required, simplifying the construction process.

Pre-cured Design:

- The product is cured before installation, ensuring its structural integrity.

Purposeful Design:

- Designed for its specific purpose, eliminating the need for additional concrete topping.

Panel Specifications:

- Available in depths up to 250mm.
- The appropriate slab depth is determined by the span and design loads of the structure.
