

# BALLITO VILLAGE

032 947 3067

## FACTS ABOUT THIS PROJECT

This type of suspended floor system is the only way to accommodate 19 000m<sup>2</sup> in the short time allowed for construction.

No propping or back propping is required, allowing finishes to be done at the lower level without the hindrance of props.

40-50mm levelling screed is required and the ceilings require minimal work to the joints and a good quality PVA finish.

In accordance with the POPI Act, please inform us in writing if you do not wish to receive these emails.
