EXPANDING OUR LEGACY SINCE 2006

Recognising the growing demand for hollow-core, Echo Prestress expanded its operations to KwaZulu-Natal in 2006, setting up a branch in Durban. This strategic move allowed us to better serve the region's burgeoning construction needs, providing top-tier precast concrete solutions for various sectors, including commercial, residential and industrial projects.

One of the standout projects undertaken by the Durban branch is the Ballito Village on the Dolphin Coast. This multi-storey townhouse development required the installation of 120mm, 150mm, 170mm and 250mm slabs, as well as beams and stairs, showcasing our versatility and capability in handling complex projects.

Through these projects and many others, Echo Prestress Durban has solidified its reputation as a reliable partner in construction, continually expanding its legacy and contributing to the growth and development of KwaZulu-Natal since 2006.
